"Saving life of a soldier is more important than killing an enemy"

CHEST AIR RELEASE NEEDLE

PVMS No: 290067

Needle for Pneumothorax

The **EmRescue Chest Air Release Needle** is employed when dealing with chest injuries that result in tension pneumothorax, which is the accumulation of air under pressure outside the lungs but within the chest cavity. Tension pneumothorax often occurs when an object punctures a person's lung, allowing air to escape from the lung and become trapped in the pleural space.

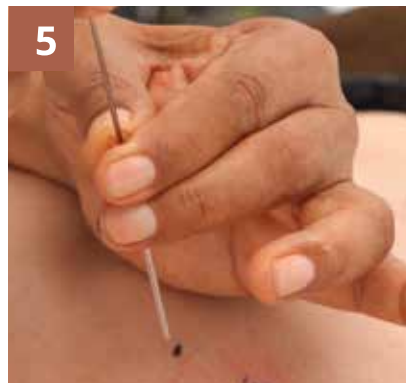

As more air enters the pleural space, pressure increases and can potentially lead to lung collapse. The EmRescue Chest Air Release Needle is inserted to alleviate the pressure by releasing the trapped air in the pleural space.
